No. 3116/19.01.2022

FOUNDATION NOTE Of the 2022 Revenue and Expense Budget Of the National Power Grid Company Transelectrica SA And estimations for 2023 and 2024

CNTEE Transelectrica SA (the Company) established according to HG 627/2000, registered in the Trade Register under no. J40/8060/2000, CUI 13328043 has the main business to provide electricity transmission services and system services, being also balancing market operator, administrator of the bonus type support scheme, and other related activities.

The Company is structured into 8 Territorial Transmission Units (Bacau, Bucharest, Cluj, Constanta, Craiova, Pitesti, Sibiu, and Timisoara), one Operational Unit – National Power Dispatcher 5 territorial dispatch centres (Bacau, Bucharest, Cluj, Craiova, and Timisoara).

Also the Company has 6 subsidiaries with legal personality, namely SMART SA, TELETRANS SA, OPCOM SA, FORMENERG SA, ICEMENERG SERVICE SA, ICEMENERG SA*) - Energy Institute for research and modernization, where it holds the following share quotas of the total:

Subsidiary	% of shares held on 30.09.2021
SMART SA	100.00
TELETRANS SA	100.00
OPCOM SA	97.84
FORMENERG SA	100.00
ICEMENERG	100.00
SERVICE SA**)	100.00

^{*)} was cancelled from NTRO

The Company's foundation of the draft 2022 BVC and estimations for 2023 – 2024 utilised the 'prudence' and 'activity continuity' principles, under economic efficiency conditions when setting the financial resources necessary to finance all activities.

The general context of 2020, which continued in 2021 as well, was difficult and challenging for all activity domains. Given the pandemic in 2021 the European Union member states took restrictive measures in order to slow down Covid-19 spreading.

In its capacity of Transmission System Operator Transelectrica has further implemented in 2021 emergency measures to mitigate COVID-19 impact, such as additional protection to minimise its effects on employees' health and security, to provide continuity of Company's objectives and activities under secure operation of the National Power System. To this effect the elaboration of the revenue and expense budget for the immediately following interval

^{**)} On 23.04.2021 the shares of Icemenerg Service SA were capitalised

focused both on continuous Company hindrance-free activities and on accomplishing investment objectives, which revive the infrastructure of the electricity transmission system.

In this context in 2021 the need occurred to rectify the revenue and expense budget (BVC) approved for 2021, necessity justified by:

- Changes in the regulatory framework pertaining to settlement rules on the balancing market, a market where Transelectrica is administrator according to the provisions of the Electricity Law 123/2012, and to those in the TSO Licence 161/2000, ANRE-issued Licence to provide electricity transmission services, system services and to manage the balancing market.

And also by:

- The current situation of the wholesale electricity market, the development and permanent growth trend of electricity procurement prices as necessary to cover one's technological consumption

The indicators in the draft 2022 BVC mainly took into account the following:

- ✓ State budget law 317 for 2022 of 28 December 2021;
- ✓ OG 26/2013 on enhancing financial discipline of economic operators where the state or administrative-territorial units are single or majority shareholders or they directly or indirectly hold majority participation, with later amendments and additions;
- ✓ OMFP 3818/2019 approving the format and structure of the revenue and expense budget, and of its foundation annexes;
- ✓ ANRE Order 124/2021 approving the average tarif of transmission services, the transmission tariff components for electricity injection into the grid and for electricity extraction from the grid; the system service tariff and the regulated price of reactive power;
- ✓ ANRE Order 171/2019 approving the Methodology establishing tariffs of electricity transmission services, with later amendments and additions;
- ✓ ANRE Order 180/2020 amending the Methodology establishing tariffs of system services, approved by ANRE Order 45/2017, with later amendments and additions;
- ✓ ANRE Order 223/2020 approving the tariffs and monetary contributions charged by the National Regulatory Authority in the Energy domain in 2021;
- ✓ Regulation (EU) 2195/2017 establishing a guideline regarding electricity system balancing;
- √ Regulation (EU) 1485/2017 establishing a guideline regarding operation of the electricity transmission system;
- ✓ ANRE Order 61/31.03.2020 approving the Regulation to schedule dispatchable generating units, dispatchable consumers and dispatchable storage installations; the Regulation for the operation and settlement of the balancing market, and Regulation to calculate and settle the imbalances of balancing responsible parties;
- ✓ Regulation to calculate and settle the imbalances of balancing responsible parties single imbalance price and amending certain orders of the National Regulatory
 Authority in the Energy domain approved by ANRE Order 213 of 25 November 2020,
 published in Romania's Official Gazette 1201 of 9 December 2020, with later
 amendments and additions:

- ✓ ANRE Order 82 of 30 June 2021 amending and adding the Regulation to supply electricity to end customers, approved by ANRE Order 235/2019, and cancelling ANRE Order 130/2015 approving the Procedure regarding electricity supply to suppliers' consumption places, to generators or network operators, other than technological consumption of electricity grids;
- ✓ Regulation (EU) 943/2019 on the internal electricity market;
- ✓ Regulation (EU) 2196/2017 (EM&REST)
- ✓ Regulation (EU) 1485/2017 (SOGL)
- ✓ Regulation (EU) 1719/2016 (FCA) establishing an orientation for capacity allocation on the long-term market;
- ✓ Regulation (EU) 631/2016 (NC RfG)
- ✓ Regulation (EU) 1447/2016 (HVDC)
- ✓ Regulation (EU) 1222/2015 (NC CACM) establishing guidelines with respect to capacity allocation and congestion management;
- ✓ Electricity law 123/2012, with later amendments and additions;
- ✓ Macroeconomic indicators provided by the National Forecast Commission (forecast of 15 November 2021);
- ✓ The contractual obligations assumed under internal and external borrowings underway with international organisations and commercial banks;
- ✓ The provisions of the applicable Collective Labour Contract of CNTEE Transelectrica SA;
- ✓ The 2022 proposals of Company divisions for maintenance plans, investments, studies and research, labour security and health, security of installations, environmental protection, professional training, risk insurance, etc.;
- ✓ Applicable legislation and regulations in force;

The percentage comparisons provided below refer to amounts budgeted for 2022 in comparison with achieved (2021) values, being indicated as "+/-x%", unless otherwise provided.

Mention should be made the 2021 annual preliminary financial results will become public on 15 February 2022, according to the *Company's 2022 Financial Communication Calendar published on the Company site*. The comparative information compared to the estimated 2021 amounts will be available on the Company site beginning with 15 February 2022, namely annexes 1-5 elaborated according to MFP Order 3818/2019.

Economic-financial indicators provided in the 2022 draft revenue & expense budget are detailed in Annex 2 and are structured as follows:

I. TOTAL REVENUES

Company revenues are mainly achieved by providing services on the electricity market in accordance with operational Licence 161/2000 issued by ANRE, updated by ANRE Decision 571/2020, with the general licence terms approved by ANRE Order 104/2014 and the

Company's final certification as transmission system operator of the National Power System according to the ownership unbundling model.

The volume and structure of total revenues included in the draft 2022 BVC amount to 3,748,328 thousand Lei, and their foundation took into account mainly:

- a) The electricity quantity estimated at 58,990,000 MWh to be provided to consumers in 2022, being 2,953,153 MWh higher than 56,036,847 MWh approved in the 2021 BVC; The energy sector has fully taken the coronavirus impact, especially in the first part of 2020, and the electricity quantity delivered to consumers got significantly reduced in 2020. Against a background of gradual economic recovery beginning with 2021, the electricity quantity supplied to consumers recorded about 5% average growth compared to 2020. In this context in 2022 the same growth trend was considered for the electricity amount delivered to consumers.
- **b)** Tariffs for Company-provided services on the electricity market, approved by ANRE Order 214/09.12.2020 approving the average transmission service tariffs and system service tariffs:

For comparison we provide below the tariffs approved for 2022 and for 2021:

	2022	2021
Average transmission tariff	23.96 Lei/MWh	20.55 Lei/MWh
System service tariff	9.32 Lei/MWh	10.82 Lei/MWh

ANRE Order 153/2020 amending and adding the Methodology establishing tariffs of electricity transmission tariffs, approved by ANRE Order 171/2019 provided integration of the component for functional system service into transmission services, such unification being enabled thanks to similar principles and rules establishing revenues and tariffs.

Transmission tariffs are determined by taking into account, among others, the regulated asset base (RAB). This includes the net amount of tangible and intangible assets corresponding to the Company's private patrimonial assets, and the net amount of assets belonging to the state public domain fully financed from one's own sources, resulting after efficient investments recognised by ANRE and used for provision of electricity transmission services.

Assets included in the RAB should be those used by the TSO to perform activities with costs found in the regulated revenue.

ANRE-approved transmission tariffs are calculated as ratio between the regulated revenue corresponding to transmission services and the electricity quantity extracted from networks.

The 9.32 Lei/MWh tariff of system services is 13.86% compared to the one charged last year, being established for the 1 January – 31 December 2022 interval. Such tariff can be reviewed quarterly by ANRE if significant differences are found compared to the forecased used to establish the tariff.

c) The amount of revenues from the allocation of interconnection capacities, correlated to the forecasted use of available interconnection capacities by traders on the electricity market;

The UIOSI principle was also taken into account, which on the RO-BG, RO-HU and RO-SR borders means compensating the participants on the market allocating the capacities, in case they give up their long-term capacity rights. Such repayments use the marginal price of daily bids or the market spread price pertaining to price differences between the Day-ahead Market (DAM) BG/HU/SR and the Romanian DAM.

On the HU-RO and BG-RO borders 20% of ATC available for long-term (monthly) auctions will be transferred to the DAM time horizon of these two frontiers, leading to smaller revenues from the long-term allocation of interconnection capacities.

Such net revenues are registered and used according to the provisions of ANRE Order 171/2019 and of Regulation (EU) 2019/943 of 5 June 2019 regarding the internal electricity market as financing source for investments made to increase the interconnection capacity with neighbouring systems.

- d) Electricity transactions under the ITC mechanism (Inter TSO Compensation);
- **e)** Average exchange rate of our national currency estimated for 2022 by the National Forecast Commission:

Currency	2022 forecast
Lei/Euro	4.89

TOTAL REVENUES forecasted for 2022 comprise:

- **1. Operational revenues amounting to 3,740,388 thousand Lei** (+16.94%), structured as follows:
- **A) Revenues provided on the electricity market** amounting to 3,701,769 thousand Lei (+17.30%), structured as follows:
- Revenues from profit-allowed activities amounting to 1,515,182 thousand Lei, namely revenues from provision of transmission services, allocation services of interconnection capacities, revenues from Inter TSO Compensation (ITC) and from other activities (revenues from issuance of location endorsements, technical connection permits, leasing the available optical fibre and other assets, waste capitalisation, etc.).
- Revenues from zero profit activities amounting to 2,186,587 thousand Lei, namely revenues from provision of technological system services and balancing market administration;
 - ✓ Revenues of technological system services in sum of 549,787 thousand Lei determined using the ANRE-approved tariff and the electricity quantity delivered to consumers.
 - ✓ Revenues from balancing market administration in sum of 1,636,800 thousand Lei, which were determined statistically depending on the amounts of transactions on this market in previous years.
- B) Other revenues amounting to 6,709 thousand Lei and Other operational revenues in amount of 31,910 thousand Lei, mainly comprising: subsidies quota for investments resumed into revenues according to the amortisement calculated for tangible assets financed from the connection fee; revenues from capitalisation (sale) of materials, spare parts, waste obtained from asset disassembling etc.
 - 2. Financial revenues amounting to 7,940 thousand Lei represent:
 - **Interest revenues** obtained by placing the available amounts of bank accounts at day end into over-night deposits, based on Agreements the Company concluded with commercial banks and by constituting term deposits with different due dates for current monthly liabilities (e.g. liabilities to suppliers, salaries, budget liabilities, and credits);

- Revenues from exchange rate differences calculated to the credits engaged for investments based on the exchange rate of the national currency, estimated for 2022.

II. TOTAL EXPENSES

The volume and structure of total expenses included in the draft 2022 BVC are sized depending on necessary expenses to procure electricity for one's own technological consumption (CPT), functional system service expenses (unplanned electricity exchanges on the PE and DAM); on the Company's programmes / plans elaborated by specific divisions for activities such as: maintenance, investments, studies, labour security and health, security of installations, environmental protection, professional training, personnel expenses, financial expenses etc., so that Company activities can be performed under economic efficiency terms while also providing safe operation of the National Power System (SEN).

Total expenses forecasted in 2022 amount to 3,747,288 thousand Lei (+18.36%), of which operational expenses in sum of 3,734,786 thousand Lei (18.42%) and financial expenses in amount of 12.502 thousand.

- 1. Operational expenses include the following expense categories:
- A. Expenses for goods and services in sum of 3,135,214 thousand Lei (+22.11%) comprising:
- A0 Operational expenses on the wholesale electricity market amount to 2,886,770 thousand Lei and include:
 - ✓ Expenses as payment obligations from the transmission and system tariffs, as well as ITC expenses amounting to 700,418 thousand Lei covered by revenues from profit-allowed activities;
 - ✓ Non-profit activity expenses amounting to 2,186,352 thousand Lei, covered by revenues achieved from non-profit activities;
- Operational expenses forecasted in 2022 are covered by revenues of profit-allowed activities amounting to 700,418 thousand Lei, and comprise:
 - ➤ Expenses necessary to procure electricity required to cover one's own technological consumption (CPT) on the electricity market, of 648,528 thousand Lei (+75%).

In accordance with the Methodology establishing tariffs of electricity transmission services, în the regulated revenue of transmission services is calculated taking into consideration the costs of electricity procurement related to the technological consumption within RET.

Given its characteristic features the Technological Consumption (CPT/losses) in the Electricity Transmission Grid (RET) highly depends on meteorological conditions, on the country-wide electricity generation and consumption structure; on the distribution of electricity flows in the domestic transmission network and on interconnection lines with neighbouring electric power systems, its value being little towards impossible to control because of the regional interconnected coupled power markets.

The current situation of prices on the wholesale electricity market is fundamentally different from the 2020 circumstances, highly influenced by the COVID-19 pandemic and compared to previous years. The difference is telling and obvious on the entire European continent and not only in Romania. In this respect one can notice the development of wholesale energy prices on the European spot market. The European situation quickly deteriorated through 2021, the energy stress being unprecedented especially for electricity and natural gas, which is fuel for electricity generation.

Market unpredictibility was obvious by great fast price rises in the context of higher prices for carbon certificates; of electricity generating capacities insufficient to replace fossil-based output, especially coal, in the context of market liberalisation, of absent competition when generators and suppliers procure electricity in order to carry out their contracts with many clients that selected the free market.

A major influence on prices of the wholesale electricity market came also from legislative changes impacting the balancing market operation.

The estimation of expenses to procure electricity necessary to cover CPT in 2022 took into account about 1 TWh electricity quantity procured with 648 Lei/MWh average price, considering procurement price stabilisation during the year and increased share of output from renewable sources.

- Congestion expenses within RET amounted to 680 thousand Lei, estimated mainly by possible outages of transmission lines to provide maintenance and by occurrence of network congestions during long drought intervals or in winter (low output in Moldova because thermal power plants have been mothballed);
- Expenses for electricity procurement to cover the consumption of auxiliary services in transformer substations (end consumer) amounting to 32,139 thousand Lei. Such expenses were estimated taking into account the required electricity within RET substations, estimated using the history of previous years, the legislative changes applicable as of 01 July 2021 (provisions of ANRE Order 82/2021) and the increasing trend of electricity procurement prices in 2022;

In the context of interconnected operation with the ENTSO-E network, particular attention is paid to SEN's balance (import / export) control with neighbouring systems. Such activities lead to balance deviations from schedule (positive / negative imbalances of BRP – unplanned exchanges).

The main factors of negative impact over the imbalances registered by BRP- unplanned exchanges are: higher installed capacity in renewable sources and insufficient control energy (secondary control reserve and fast tertiary reserve). Expenses of transactions with unplanned DAM exchanges were estimated taking into account the development of sale / purchase transactions in the last three years; the DAM closure prices and a 40% growth of such DAM closure price, corroborated with the legislative changes brought by ANRE on the electricity market.

- Inter TSO Compensation (ITC) expenses in sum of 19,000 thousand Lei, estimated using the mechanism which compensates the transmission network utilisation for cross-border exchanges. The factors that impact ITC values are electricity exchanges import, export, transit on SEN's interconnection lines, correlated with the electricity flows transited in all countries participating to the mechanism.
- Operational expenses forecasted in 2022 and covered by non-profit activity revenues amounting to 2,186,352 thousand Lei, comprise:
 - > Expenses for technological system services in amount of 549,552 thousand Lei;

In accordance with the provisions of Regulation (EU) 2195/2017 and of the Electricity and natural gas law 123/2012, with later amendments and additions, CNTEE Transelectrica procures by daily bids from Participants on the Balancing Market system services for secondary control and fast & slow teriary control in order to provide steady SEN operation.

The Company procures technological system services from generators with a view to maintain the operational security of SEN and electricity quality at parameters provided in applicable technical norms, based on needs established by the National Power Dispatcher (organisational unit of the Company) that provides steady-state and operational security of SEN.

Beginning with 17 December 2021 at 11:15 CET CNTEE Transelectrica SA was successfully connected to the European platform IGCC – International Grid Control Cooperation. IGCC platform is an optimisation method for frequency-exchange power secondary control by reducing contrary actions of member operators' regulators, thus resulting optimised utilisation of the secondary control band system reserve. Consequently UNO-DEN in 2022 took into account adjusting the secondary control band, namely diminishing it.

Mention should be made that, according to the IGCC cooperation agreement, CNTEE Transelectrica SA undergoes test stage for 12 months and if necessary the newly determined amounts can be revalued.

Also, when ANRE Order 127/2021 regarding the clauses and terms for balancing service suppliers, the secondary control reserve will become a new type of product, namely frequency restoration reserve with automatic activation and will be procured separately by direction (not by band as before), actually estimating diminution of costs for the reserve procured at power downgrade.

In addition considering the liquidity of fast tertiary reserve at power upgrade and downgrade existent on the balancing market, and the prevailingly balanced notification of generators, UNO-DEN took into account diminishing the procured reserves, provided quantities are revaluated closer to real time if circumstances so require.

Transelectrica procures system services for secondary control and for fast & slow tertiary control from qualified electricity generators with a view to maintain the safe secure operation of the national electric power system and the quality of electricity transmitted at parameters specified in applicable norms.

Balancing market administration expenses in amount of 1,636,800 thousand Lei;

Balancing market operation is stipulated in the Electricity and natural gas law 123/2012 and ANRE Order 61/2020 approving the Regulation for balancing market operation & settlement and the Regulation to calculate and settle imbalances of balancing responsible parties.

In 2022 the foundation of the balancing market took into account the following issues:

Development trend on the balancing market

- It is defined by the balancing market development in the previous time interval;
- Determined taking into account the influence of:
 - Common settlement rules for scheduled electricity exchanges and common settlement rules for unplanned electricity exchanges established according to the provisions of Regulation (EU) 1485/2017 establishing a guideline regarding operation of the electricity transmission system and of Regulation (EU) 2195/2017 establishing a guideline regarding electricity system balancing;
 - Application of imbalance netting rules between all TSOs according to the IN (Imbalance Netting) Platform;

Regulatory issues:

- Removing price limits of balancing market offers; The regulation for the operation and settlement of the balancing market approved by ANRE Order 61/31.03.2020, published in Romania's Official Gazette 287/06.04.2020, Regulation to schedule dispatchable generating units, dispatchable consumers and dispatchable storage installations, approved by Order 61/31.03.2020 of ANRE president, published in Romania's Official Gazette 287/06.04.2020.
- Removing the obligation to participate on the balancing market; Regulation to calculate and settle imbalances of balancing responsible parties – single imbalance price and amending certain orders of ANRE president, approved by Order 213 / 25 November

2020 of ANRE president, published in the Official Gazette 1201 of 9 December 2020, with later amendments and additions;

- The balancing market begain utilising the 15 minutes' settlement interval;
- The single settlement price of the balancing market was applied beginning with 01 February 2021;
- From 01 June 2021 onward a new set of rules is applied to settle scheduled and unplanned electricity exchanges, which provides financial settlement between Transmission System Operators, thus removing compensations in kind determined according to the ENTSO-E methodology by Settlement Centres in Brauweiler (Germany) and Laufenburg (Switzerland), exchanges which CNTEE Transelectrica SA transacted on the Day-Ahead Market and distinctly recorded in the Revenue and expense budget with the Balancing Responsible Party Unplanned Exchanges following electricity transaction on the Day-Ahead Market;
- Beginning with 01.01.2022 all TSOs apply the imbalance netting rules according to the IN (Imbalance Netting) Platform.

Balancing market operational issues:

- Contracting mode on markets previous of the balancing one;
- The development of the average price registered on the balancing market;
- The development of negative imbalance recorded by electricity suppliers on the balancing market;
- Development of hydraulicity;
- Development of the electricity generation and consumption;
- Development trend of CO₂ certificates;

In 2022 estimations are the contracting mode on markets before the balancing one, the development of nation-wide electricity generation and consumption, the European context of development for the electricity market, the development of CO_2 certificates and the management of COVID-19 spreading country-wide will have significant impact over the balancing market's revenues / costs.

The scheduled electricity exchanges and the common settlement rules of unplanned electricity exchanges (FSKAR calculation methodology - Financial Settlement of $K\Delta f$, ACE and ramping period)

The application of Regulation (EU) 1485/2017 establishing a guideline regarding operation of the electricity transmission system and of Regulation (EU) 2195/2017 establishing a guideline regarding electricity system balancing, in ENTSO-E Transmission System Operators elaborated and approved common rules for scheduled and unplanned electricity exchanges. Mention should be made the new set of common settlement rules for scheduled and unplanned electricity exchanges provides making financial settlement between Transmission System Operators, thus removing compensations in kind determined according to the ENTSO-E methodology by Settlement Centres in Brauweiler (Germany) and Laufenburg (Switzerland), exchanges which CNTEE Transelectrica SA transacted on the Day-Ahead Market and distinctly recorded in the Revenue and expense budget with the Balancing Responsible Party Unplanned Exchanges following electricity transaction on the Day-Ahead Market.

FSKAR calculation methodology, called Accounting and Financial Settlement of $k\Delta f$, ACE and Ramping period became effective on 1 June 2021. Settlement Centres of Brauweiler (Germany) and Laufenburg (Switzerland) will transmit results to each Transmission System Operator in the form of daily files containing the scheduled and unplanned exchages

(quantities – prices) calculated for such Transmission System Operator in each settlement interval. The established price is a weighted average of transaction prices on Day-Ahead Markets of all ENTSO-E members states, being expressed in Euro/MWh. Costs and revenues pointed out in the invoice received from JAO for settlement of electricity from unplanned exchanges will be included in the settlement calculation on the Balancing Market according to the provisions of ANRE Order 33/2021 amending and adding the Regulation to calculate and settle the imbalances of balancing responsible parties – single imbalance price approved by Order 213/2020 of the president of the National Regulatory Authority in the Energy domain.

All TSO-s netting their inter-imbalances, IN (Imbalance Netting) Platform

Beginning with 01.01.2022 the European International Grid Control Cooperation (IGCC) or IN (Imbalance Netting) Platform became operational for imbalance netting between all TSOs, which provides automatic frequency restoration based on part IV of Regulation (EU) 2017/1485.

Mention should be made the International Grid Control Cooperation (IGCC) represents the project selected in 2016 by ENTSO-E in order to become the future European platform for imbalance netting, as defined in Regulation (EU) 2017/1485 of 2 August 2017 of the Commission establishing a guideline regarding operation of the electricity transmission system (article 22). IGCC's initiative was initiated in 2010 by German operators and extended later to central European systems, representing a method to optimise frequency-exchange power secondary control by reducing contrary operations of regulators from member operators, thus providing optimised utilisation of the Frequency Restoration Reserve with automatic activation, aFRR, overall.

Expenses regarding balancing market administration were budgeted to fully cover the revenues achieved by administrating this market (zero profit activity segments).

A1 - Expenses regarding inventories amounting to 18,856 thousand Lei (+10.43%), increase mainly determined by:

- The need of spare parts procurement by territorial transmission units for their operational activities, operational centres and substations; support services of territorial transmission units, I&C services, motor car services;
- Higher fuel prices, which are added new travel needs on site to perform important investments into substation refurbishment, replacement of AT and transformers in electric substations, upgrading the command control system of substations, etc.;
- Higher utility prices (electricity, natural gas);
- Capitalisation of inventories obtained from dismantling existing equipment in Companymanaged substations as a result of maintenance, refurbishment, and modernisation activities. Revenues forecasted from the capitalisation of such inventories are properly recorded under "other operational revenues" or "revenues from other provisions";
- The need to procure fire prevention and fighting (PSI) materials, emergency situations (ES); providing individual protection equipment to employees working in electric installations and along the OHL corridor, according to labour health and security norsm. In accordance with applicable legislative requirements for labour health and security in 2022 security devices shall be further provided to comply with minimum labour health & security requirements and workers can use working equipment; marking all points with accident hazard in the installations, etc.;
- In accordance with Law 307/2006, republished, regarding fire fighting, PSI installations should be maintained operational. Following periodical checks and IGSU indications, the need was ascertained to replace certain extinguishers, PSI pickets, fire extinguishing materials and means, etc. (because of their age or deterioration). In

accordance with the provisions of Law 481/2004, republished, regarding civil protection, necessary funds should be provided annually to procure civil protection materials (in case of earthquake, floods, scorching heat, snowing-in, etc.);

- Procuring consumables necessary for daily activities performed Company-wide (information and telecommunications of the National Power Dispatcher managing also the balancing market, for data storage/archive/saving equipment as needed for data protection locally);
- Performing the electricity & water contracts or the need to conclude new contracts with indexed tariffs in order to provide working conditions for administrative services in Company's units and sub-units (executive offices, substations, CE, etc).

A2 - Expenses regarding services provided by third partis in sum of 155,719 thousand Lei (4.3%). Out of the total such expenses about 99% are represented by maintenance and repair expenses amounting to 154,135 thousand Lei.

Company-wide the Maintenance Programme is structured under an integrated plan comprising mostly maintenance work specific to Company's activities such as: maintenance for the electricity transmission grid (RET); maintenance of the integrated installations security and supervision systems; maintenance of IT&Tc systems (IT&Tc equipment of electric substations, territorial dispatching units, etc.); other maintenance services.

- **1. RET Maintenance Programme** for 2022 was structured by programmes and projects depending on installations and taking into account the "Preventive maintenance regulation for RET installations and equipment", NTI-TEL-R-001-2007 code, version 5, as follows:
- a. Services / work in electric substations and power transformer units:

Primary circuits

- Periodical control, technical revisions, accidental interventions, special work, current repairs derived from minor preventive maintenance and current repairs;
- Disassemblage:
 - Existing equipment in the 400 kV, 220 kV, 110 kV and 20 kV bays (disconnector, metering transformers, arresters, insulator chains etc.)
 - Power transformer units (T, AT) inclusing fire prevention & fighting installations;
- Installation:
 - Rehabilitating the 400 kV, 220 kV, 110 kV and 20 kV bays: replacing equipment provided by the Company (disconnector, metering transformers, arresters, etc.)
 - Replacing the insulation (400, 220, 110 kV);
 - Repairing the grounding installation:

Secondary circuits

- Periodical control, technical revisions, accidental interventions and special work;
- Repairs to auxiliary service panels, direct and alternating current;
- Repairing distribution circuits of alternating current;
- Repairing the blocking circuits of electric substations;
- Repairing the transformer casings;
- b. Services / work to Overhead Lines, technological buildings and other power installations:
- Periodical control, technical revisions, accidental interventions, special work, current repairs derived from minor preventive maintenance and current / capital repairs;
 - Foundation work (mash off, plasters, repairs of caps, water-repellers);
 - Work to earth plates (plate repair, measuring the resistance of tower sockets, remaking improper plates);
 - Replacing out-of-shape metallic items or taken out, as well as their protection;
 - Towers consolidation:
 - Installing indicator and warning plates;

- Replacing improper items of the staying system (butts, clamps, etc.);
- Replacing active and protective conductors that are deteriorated;
- Sag straining of active and protection conductors;
- Consolidations and repairs of technological buildings;
- c. Services / work specific of maintenance to electricity metering equipment (making or repairing supply circuits, communications, repairs of metering equipment, of electricity quality monitoring devices, etc.).

RET Maintenance Programme was estimated taking mainly into account to further major maintenance operations underway and the Preventive maintenance regulation for RET installations and equipment.

The future takes into account efficient RET maintenance by means of:

- Emphasis placed on preventive maintenance to reduce the corrective activities;
- Furthering the OHL multispectral inspection;
- Using non-invasive methods to find out the technical condition of electric installations;
- Carrying on the sectoral contract providing medium and high voltage primary and directing them to be included into Company installations.
- **2. Maintenance of security systems** as determined by the need to provide repairs and maintenance of Integrated Security Systems for equipment installed both in the Company's administrative offices and in the substations belonging to Territorial Transmission Units.
- **3.** IT@Tc maintenance and Teletrans maintenance; the licences and platforms used by UNO-DEN (DAMAS, NEPLAN, POWERSYM, EMS SCADA, ORACLE, SAP etc.) and IT & Tc equipment found Company-wide require subscription and technical support services associated to licences as well as provision of maintenance services.
- **4. Other maintenance services**; unexpected expenses under this budget entry are estimated according to needs (as required by the Company's organisational entities) to provide continuous activities and mainly include:
 - Annual revision services (checks, tests, controls and trials according to supplier instructions), repair and maintenance of the car park, of installations;
 - Verification, repair and recharge of PSI extinguishers following IGSU's periodical checks and indications;
 - Repair, maintenance and clean-up services to oil product separators in electric substations;
 - Maintenance services to administrative buildings and operational centres;
 - Competence testing scheme alternating current to assess the performance of the metrological check-up laboratory of electricity metering means;
 - Metrological services associated to metrological laboratoaries and installation of metering means;
- Maintenance and repairs of standard measuring means used in metrological activities; Mention should be made the above mentioned services are found under ongoing contracts and contracts underway of signing in 2022.

We can also mention that most service contracts comprise, besides planned services (technical revisions, checks, authorisations, etc) services of accidental nature as well whose amount / share depends on the events and defects occurring during installation operation.

With a view to maintain the operational state, to provide secure operation, to comply with technical and economic conditions, to observe the special licensing terms (of ISCIR/CNCIR) it is necessary to allocate the amounts requested in this foundation note for administrative & technological buildings the Company manages and the installations serving such spaces; for the heating and air conditioning installations of administrative & technological spaces, and for the auxiliary installations supplying electric outfits.

The entry "Expenses for services provided by third parties" includes also the following expense items:

- Expenses regarding locational administrations and rents amounting to 389
 thousand Lei according to lease contracts concluded by territorial transmission units;
- Expenses with insurance premiums amounting to 1,195 thousand Lei (+53.8%) including: insurances for goods, people, buildings, motor cars and equipment; professional liability insurance policies for Supervisory Board and Directorate members according to their mandate contracts (the Company is managed under two-tier system). Taking into account ASF decided withdrawing the operational licence, ascertaining insolvency and promoting the demand to open bankruptcy procedure against City Insurance, insurance companies have increased the Price of RCA & CASCO policies by amounts ranging from 30% to 200%, thus in 2022 the Premium turned bigger than in precedent years.

A3 - Expenses with other services provided by third parties in sum of 73,869 thousand Lei (+15.04%). Such expenses increased mainly determined by higher expenses of assets guard (Law 333/2003 on guarding persons and goods) mainly because the minimum economic wage grew on 01 January 2022, as well as other expenses for third party provided services (labour protection, labour health and security, environmental protection, transportation of assets and persons, rating agency expenses, organisation of symposia and conferences, studies & research, meteorological services, protocol & sponsorship expenses, etc.).

Sponsorship expenses amounted to 1,500 thousand Lei, being provided in the draft 2022 BVC. Corporative Social Responsibility (CSR) is a management process whereby CNTEE Transelectrica SA wants to contribute to developing a sustainable performing Romanian society.

In 2022 CNTEE Transelectrica SA continues the CSR policy in order to reach established objectives by supporting disfavoured categories and promising young people, taking into account the educational quality and the environmental impact.

Another priority in 2022 is to support young generations by getting involved in their professional development and granting scholarships both to students and younger pupils having acquired special results in the educational establishments of energy profile, and by equipping research laboratories of faculties / high schools.

As regards Maecena activities each year the Company carries on campaigns to assess the employees' health: general condition exams, lab tests, anti-flu vaccines, consultations to prevent cardio-vascular desease, investigations to prevent occurrence of invalidating illnesses. In case of serious aflictions the Company provides finacial support to employees for special medical treatments, flexible or reduced working hours during the doctor-recommended time.

Also under **Expenses with other services provided by third parties** an important share (about 26%) belongs to expenses for services regarding the market coupling mechanism and expenses generated by requirements of pan-European codes, interconnection responsibilities to compatibilise equipment in order to operation, and the implementation stage of projects developed for ENTSO-E platforms where CNTEE Transelectrica SA is member, amounting to 19,040 thousand Lei.

CNTEE Transelectrica SA in its capacity of transmission system operator participates actively as operational member to implementing and developing own IT systems and electric power systems interconnected at ENTSO-E level. PANEUROPEAN codes implemented are: Regulation (EU) 943/2019; Regulation (EU) 2195/2017 (EBGL); Regulation (EU) 2196/2017 (EM&REST); Regulation (EU) 1485/2017 (SOGL); Regulation (EU) 1719/2016 (FCA); Regulation (EU) 631/2016 (NC RfG); Regulation (EU) 1447/2016 (HVDC); Regulation (EU) 1222/2015 (NC CACM).

With a view to provide synchronous interconnected operation according to ENTSO-E's requirements CNTEE Transelectrica SA should fully comply with technical conditions, using jointly the dedicated calculation and data exchange platforms.

The activities and projects mainly include, as provided for the budgeted time interval:

- Implementing the Verification Platform at ENTSO-E for inter-TSO data exchanges;
- Basic services for data exchages, coordinated calculations TSCNET Services, covering the costs generated by the Company's affiliation to TSCNET shareholders;
- MARI project providing pre-implementation PMO services (algorithm design, methodology), platfom implementation services (software & hardware development) dedicated to the single European platform for exchanges of balancing electricity from the frequency restoration reserves with manual activation;
- PICASSO project providing pre-implementation PMO services (concept, algorithm, methodology), platfom implementation services (software & hardware development) dedicated to the single European platform for exchanges of balancing electricity from the frequency restoration reserves with automatic activation;
- IGC project providing one's own equipment compatibilisation with that of neigbouring TSOs:
- Services for ENTSO-E activities in the region RGCE;

B. Expenses with taxes, charges and assimilated payments in sum of 25,560 thousand Lei comprising:

- Royalty expense amounting to 5,678 thousand Lei; in accordance with the provisions of Law 244/2020 amending the Electricity and natural gas law 123/2012, beginning with 2021 the RET concession royalty is in quantum of 0.4%.
- Licence fee expenses amounting to 3,832 thousand Lei; in accordance with the provisions of ANRE Order 223/2020 approving the tariffs and monetary contributions charged by the National Regulatory Authority in the Energy domain in 2022, the monetary contribution is 0.2% of the turnover achieved in the previous year from licensed activites:
- Environmental fee expenses amounting to 225 thousand Lei;
- The natural monopoly tax expense amounting to 9,070 thousand Lei; in accordance with the provisions of OUG 130/2021, the term provided in article 6 of OG 5/2013 establishing special taxation measures for natural monopoly activities in the electricity sector is prorogated until 31 December 2025, inclusive;
- Expenses with other taxes and charges amounting to 6,755 thousand Lei; this amount mainly comprise: buildings and land tax expenses; charge for the use of state-owned lands; charge on transportation means; stamp tax; excise for CPT, road taxes, etc.
- **C.** Personnel expenses amounting to 282,827 thousand Lei, growing 1.35% as budgetary indicator; personnel expenses are founded in Note 1 and structured as follows:
- Salary expenses amounting to 265,226 thousand Lei including wage expenses and bonuses structured as follows:
 - Salary expenses amounting to 232,772 thousand Lei, recording 5.24% increase; they are compliant with the wage policy established by the 2022 State budget law and with the provisions of OG 26/2013.
 - Bonuses amounting to 32,454 thousand Lei, mainly comprising:
 - Social expenses amounting to 11,639 thousand Lei; according to the applicable Fiscal Code, social expenses are deductible within the limits of up to 5% quota applied to the amount of salary expenses. In 2022 the Company provided 5% social expenses in the draft BVC, percentage applied to the salary expenses amount;

- Meal tickets amounting to 8,944 thousand Lei, granted under Law 142/1998, with later amendments and additions and under the Company's Collective Labour Contract;
- Holiday voucher expenses amounting to 3,161 thousand Lei;
- Other personnel expenses in sum of 8,610 thousand Lei representing settlement of electricity quota for Company employees according to the provisions of the Company's applicable CCM;
- Employees testing expenses COVID 19 amounting to 100 thousand Lei;
- Other personnel expenses amounting to 300 thousand Lei, which represent an estimation of salary expenses which might be owed under court rulings to employees having labour disputes with the Company.
- Expenses related to the mandate contract and other managerial and control bodies, commissions and committees amounting to 3,970 thousand Lei, corresponding to mandate contract expenses for Directorate and Supervisory Board members, fixed and variable components since the Company is managed under two-tier system.
- Expenses with employer-owed contributions in amount of 13,331 thousand Lei; this chapter comprises:
 - Labour ensuring contributions associated to the salary fund for employees hired under CIM and for the remunerations of Directorate and Supervisory Board members;
 - Unit's contributions to social insurance associated to the OAVTs paid under enforceable court rulings for the Company (for the performance bonus of OAVT Certificates granted to former non-executive and executive administrators based on mandate contracts concluded in 2013 – 2017);
 - *Unit's contribution to facultative pension schemes* for Company employees that adhered individually to a facultative pension fund (pilon III of facultative pensions) amounting to 3,924 thousand Lei.

D. Other operational expenses amounting to 291,185 thousand Lei (+3.23%) comprise:

- Expenses regarding non-current assets amounting to 2.285 thousand Lei represented by expenses with the non-amortised value of assets planned to be taken out of operation when beginning the upgrade / refurbishment of electric installations;
- Other expenses amounting to 18,835 thousand Lei, mainly represented by: expenses with internal and international subscriptions owed by CNTEE Transelectrica SA as member in European organisations (ENTSO-E, CIGRE, SECI, and AIR Moldova) in sum of 5,928 thousand Lei; expenses generated by the COVID-19 pandemic in the current epidemiologic context of sanitary protection measures established Company-wide, in amount of 168 thousand Lei; compulsory Company expenses according to the capital market legislation, of 156 thousand Lei; the electricity quota of retired employees in sum of 1.339 thousand Lei; other operational expenses amounting to 2.244 thousand Lei; expenses for the performance bonus of OAVT Certificates granted to former non-executive and executive administrators under their mandate contracts concluded in 2013 2017, amounting to about 9,000 thousand Lei;
- Amortisement expenses of tangible and intangible assets in sum of 270,337 thousand Lei, corresponding to investments commissioning and asset acceptance;
- Amortisement expenses for intangible assets recorgnised according to IFRS 16 in amount of 9,144 thousand Lei, since the Company performs partially in rented spaces. Beginning with 01.01.2019 IFRS 16 – Leasing Contracts became applicable, recognising the utilisation right of Company-rented spaces in the Platinium Office

Builidng of Str. Olteni 2-4, as asset valuated at the rent payable amount until the rental contract end. The asset recognised according to IFRS 16 is amortised at monthly rent and registered under 'Amortisement expenses of tangible and intangible assets':

- Allowances and impairments for value losses and provisions in sum of -9.416 thousand Lei, structured as follows:
 - Allowance and provision expenses amounting to 584 thousand Lei, representing provisions to depreciate current assets (inventories depreciation);
 - Revenues from provisions and allowances for impairment or value loss in sum of 10,000 thousand Lei, representing provision revenues related to OAVT-s to be paid in 2022 (contributions included) under enforceable court rulings the Company received for the performance bonus related to OAVT Certificates granted to former non-executive and executive administrators under their mandate contracts concluded in 2013 – 2017;
- **2. Financial expenses** amounting to 12,502 thousand Lei (+2.98%) include expenses for due interest to be paid in 2022 for credits committed in view of current activities and investments, as well as expenses with negative exchange rate differences resulting from monthly revaluation.

III. Gross result

In accordance with the factors provided above estimations are in 2021 the gross profit will amount to 1,040 thousand Lei, recording 39,674 thousand Lei drop.

The reduction of the profit estimated to be obtained in 2022 has been mainly influenced by the following issues:

- Changes in the regulatory framework regarding the settlement rules on the balancing market, where Transelectrica is administrator according to the provisions of the Electricity law and the TSO Licence 161/2000 issued by ANRE to provide electricity transmission services, system services and manage the balancing market;
- The current situation of the wholesale electricity market; the development and permanent increasing trend of electricity procurement prices as necessary for one's technological consumption;
- The electricity market's unpredictibility by fast great rises of procurement prices;
- Reduced tariff of technological system services beginning with 1 January 2022;
- Expenses generated by requirements of pan-European Codes, the interconnection responsibilities to turn equipment compatible for operation and the implementation stage of projects developed for ENTSO-E platforms, where CNTEE Transelectrica SA is member;

IV. INCOME TAX

These expenses were determined according to the provisions of Law 227/2015 on the Fiscal Code, with later amendments and additions.

Fiscally non-deductible expenses and revenues non taxable when calculating the 2022 income tax were estimated using the non-deductible expenses and non-taxable revenues included in the draft 2022 BVC.

V. ACCOUNTING PROFIT REMAINING AFTER INCOME TAX DEDUCTION

Net profit forecasted to be achieved in 2022 was distributed according to the provisions of applicable legislation, namely:

- ✓ OG 64/2001 on profit distribution in national societies, national companies and trading companies with full or majority state capital, and in independent authorities, approved with amendments by Law 769/2001, with later amendments and additions;
- ✓ OMFP 144/2005 approving the Specifications to determine amounts used in profit distribution according to OG 64/2001 on profit distribution in national societies, national companies and trading companies with full or majority state capital, and in independent authorities;
- ✓ OMFP 128/2005 regarding certain accounting regulations applicable to economic agents;
- ✓ Law 227/2015 on the Fiscal Code, with later amendments and additions;
- ✓ Regulation (EU) 943/2019 regarding the internal electricity market as financing source of investments to upgrade and develop the interconnection capacity with neighbouring systems;
- ✓ ANRE Order 171/2019 aprpoving the Methodology establishing tariffs of electricity transmission services, with later amendments and additions;

VI –VII. <u>ELIGIBILE REVENUES AND EXPENSES FROM EUROPEAN FUNDS</u>

In 2022 the Company carries out projects financed from European funds which revenues / expenses were estimated for according to Annex 1.

VIII. FINANCE SOURCES FOR INVESTMENTS for 2022

Financing sources of investments forecasted in 2022 amounted to 744,312 thousand Lei and are structured as follows:

Thousand Lei

No.	Financing sources of investments	2022
	Total financing sources, of which:	744,312
Α	One's own sources	298,149
В	Budgetary allocations	1,824
С	Other sources	127,856
D	Available sources	292,513
Е	Connection fee sources	23,970

IX. INVESTMENT EXPENSES in 2022

The 2022 Investment Plan of CNTEE Transelectrica SA (Annex 4 to BVC/2022) was elaborated according to the investment priorities estalished in the RET Development Plan for 2020 – 2029.

The Investment Plan was elaborated taking into account the provision of financing sources, especially towards commitments contracted in previous years (further objectives) and for new investment projects.

The Company's 2022 Investment Plan includes mainly investment objectives such as:

- Refurbishment / modernisation of vital nodes in the Electricity Transmission Grid (RET), the electric substations, which were prioritised based on multi-criteria analysis;
- Developing the high voltage Overhead Lines network to provide continuity and security of consumers' supply (achieving the 400 kV ring of Romania);
- Enhancing RET to integrate new producers into the National Power System (SEN);
- Developing RET's interconnection capacity both within ENTSO-E and with neighbouring countries outside the European Union (Moldova, Serbia, and Turkey);
- Development and modernisation of RET's protection and security infrastructure;
- Upgrading the IT and telecommunication infrastructure;

The 2022 investment expenses were structured as follows:

Thousand Lei

No.	Expense categories	2022
	Total general (A + B + C)	506,100
Α	Company expenses	447,239
В	Investment expenses financed from connection fees	10,510
С	Repayments of credits related to investment objectives	24,351
D	Financial investments	24,000

X. FOUNDATION DATA

1 - 6. Foundation of salary expenses is provided in Note 1

8 - 9. Outstanding payments and receivables

The Company's draft 2022 BVC does not provide outstanding payments.

Outstanding receivables in amount of 117,351 thousand Lei maintained relatively at the same level as approved for BVC/2021 and represent invoices not collected on due date from clients on the electricity market because of their incapacity to pay, being under insolvency or bankcruptcy procedures.

Taking into account the compliance with the terms provided in applicable legislation, namely:

- Law 317/28.12.2021 regarding the 2022 state budget;
- Law 154/2016 approving Governmental Ordinance 11/2016 amending and adding Governmental Ordinance 26/2013 on financial discipline of economic operators where the state or administrative-territorial units are single or majority shareholders or they directly or indirectly hold majority participation, according to which "Economic operators provided in article 4 para (1) let. d) whose shares are admitted for transaction on a regulated market and their subsidiaries provied, as per legal terms the revenue and expense budget accompanied by foundation annexes, elaborated according to applicable legal provisions, to the Shareholders' general assembly for approval, after preliminary consultation of trade union organisations and publish this revenue and expense budget with values of the curent year, within 60 days from the enforcement of the annual state budget law....";
- OMFP 3818/2019 approving the format and structure of the revenue and expense budget, and of its foundation annexes, namely Annex 6 according to which: "Economic-financial indicators of the current year will be estimated taking into account the indicators forecasted / achieved in the precedent year...",

Corroborated with

- The Company's 2022 Financial communication calendar, available on the Company's site, section Investor Relation / Periodical Reports / Financial Calendar published in accordance with the provisions of the capital market legislation;
- Article 236 of ASF Regulation 5/2018 on the issuers of financial instruments and market operations, according to which "The information included in quarterly, half-yearly and annual reports, (...), which has not been made public according to legal provisions, is until reports publications observing the provisions of article 7 from Regulation (EU) 596/2014, under the legal regime applicable to privilegied information".

Full informative materials used for the foundation of the 2022 revenue and expense budget, namely the 2021 preliminary annual financial data will be available for consultation beginning with **15 February 2022**, calendar date provided in the 2022 Financial Communication Calendar related to publishing the **2021 Annual preliminary financial results**.

B. BUDGETARY ESTIMATIONS FOR 2023 – 2024

The budgetary estimations of 2023 – 2024 provided in the excerpted pattern of revenue and expense budget the following was taken into account:

- ✓ Macroeconomic data provided by the National Forecast Commission, 15 November 2021 forecast;
- ✓ OMFP 3818/2019 approving the format and structure of the revenue and expense budget, and of its foundation annexes;
- ✓ ANRE Order 171/2019 approving the Methodology establishing tariffs of electricity transmission services, with later amendments and additions;
- ✓ ANRE Order 180/2020 amending the Methodology establishing tariffs of system services, approved by ANRE Order 45/2017, with later amendments and additions;
- ✓ The foundation of the draft 2022 BVC;
- ✓ Contractual obligations committed under internal and external borrowings underway;
- ✓ Provisions in the applicable Collective Labour Contract of CNTEE Transelectrica SA;
- ✓ Applicable legislation and regulations in force;

x x

Mention should be made that, according to applicable regulations, the draft 2022 revenue and expense budged and 2023-2024 estimations were elaborated by consulting the Company's trade union organisation.

At the same time the draft budget underwent managerial financial control according to HG 1151/2012 approving the Methodological Norms on the organisation and execution of managerial financial control.

In accordance with OG 11/27.01.2016 amending and adding OUG 26/2013, article 4, para (1), lit. d) "Revenue and expense budgets of economic operators are approved by Decision of the Shareholders' General Assembly or, as applicable, of the Supervisory Board's, according to legal terms, in case of economic operators whose shares are admitted for transaction on a regulated market and of their subsidiaries".

At the meeting on 19.01.2022 the Supervisory Board of CNTEE Transelectrica SA verified the draft 2022 revenue and expense budget and the 2023-2024 estimations, as mentioned in Decision no. 3.

Taking into account the above and based on the provisions of article 14, para (1), let. i) from the Articles of Association of CNTEE Transelectrica SA updated on 21.12.2020 by HAGEA 12/2020, we propose to the Shareholders' General Assembly to establish the 2022 Revenue and expense budget and the 2023-2024 estimations for the financial year submitted to approvel, in accordance with the annexes to this Note.
